Other income / expenses (incl. interest on debt)	-0,5	-0,5	-6,3
Net profit/loss realised	17,6	17,6	8,9

On a significant portion of its local currency derivatives portfolio (typically 20%-30%), TCX is short EUR as opposed to USD. This short EUR position is managed in two ways: first, through the purchase of EUR denominated securities (the "liquidity" portfolio), and second through EUR:USD swaps. These instruments combine to create a matching long EUR position that is designed to neutralize the P&L impact of EUR:USD exchange rate movements. However, for IFRS reporting purposes, the derivatives and securities portfolios must be reported separately. Depending on the movements of the EUR:USD exchange rate, this can lead to reporting translation losses on the liquidity investments. Such losses are always offset by gains on the EUR leg of the local currency derivatives where TCX is short EUR.
